You will never miss any driver, software or game patches. It's also useful in recovering crashed operating system and registry. And it provides you the features like automatic driver updates, detection of new hardware devices, updating video drivers, game drivers, BIOS/UEFI and many more. Even though, if you have multiple PC and your driver version is not the newest one, you can get the updates directly on the websites listed in your driver updater. You also have a system restore option and 24x7 free

support from experts. It gives you an efficient way to keep your computer in good condition. Awards/Reviews User Reviews

This is a driver updater with lots of useful features like automatic driver updates, registry cleaner, system restore and many more. But it has a few problems like it's very slow in updating the drivers. It doesn't give back the drivers so it is pretty useless for new computers. The support is slow and sometimes they take a lot of time to respond. I get lots of reports about their slow speed and issues with installation. Many users also complained about their slow speed, bugs and crashes with multiple computers. Also they do not provide any software free trial, so you can't try it before buying it. Driver Booster offers lots of useful features, but still not satisfied with their performance and support, so I will not recommend this tool to others. I do not have enough time to look for the best free software to fix my computer's problems, because I always use only paid software because I know its quality and efficiency. I do not use anything which have bugs. I want something good, so that it gives me fast and efficient support. So I am looking for one of the best tools which can fix my PC problems, but I couldn't find anything good enough. So, I was looking for the tool which can fix my PC problems and had the best performance, so that I can use it 24/7. I finally found Driver Booster. I was a little skeptical at the beginning because the description of the tool looks like a scam and the price is too high for something that can do so many things. But I thought it has the best and most complete features and no bugs or problems. I used it for 10 days and I am satisfied with its performance. It helps me to know which problems my computer has and how to fix them. I am very happy to use this tool because it fixed all the problems 82157476af
